

MCA (Revised)
Term-End Examination
June, 2012

MCS-021 : DATA AND FILE STRUCTURES

Time : 3 hours

Maximum Marks : 100
(Weightage 75%)

Note : Question number 1 is Compulsory. Attempt any three questions from the rest. All algorithms should be written nearer to C language.

1. (a) What are the pre conditions for applying binary search on any list containing Integer values ? Write the algorithm and manually run it on the following list of number : 10

10 27 23-56 38 66 45

What is worst case complexity of the above algorithm ?

- (b) Differentiate between AA trees and Red - Black trees ? Construct an AA - Tree using the following nodes. Show all intermediate steps and balancing of tree. 10

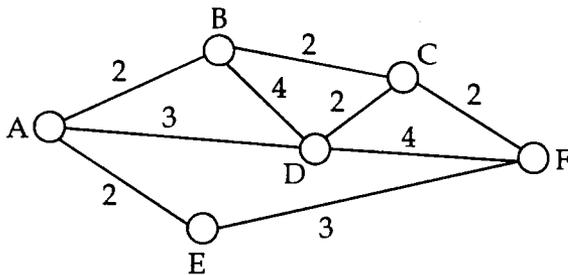

17, 4, 25, 98, 28, 33, 42, 11, 6, 73

(c) Consider the following matrix :

$$X = \begin{bmatrix} 5 & 6 & 2 \\ 8 & 2 & 4 \\ 1 & 3 & 6 \end{bmatrix}_{3 \times 3}$$

- (i) Write the steps involved in calculating the rank of X. 5
- (ii) Write an algorithm to find the transpose of X. 5
- (d) Write an algorithm that sort a given linked list of integers. Also, write a function that splits this linked list into a linked list of even integers and a linked list of odd integers. 10
2. (a) Construct a binary tree using the following pre - order and in - order trasversals : 10
Pre - order : A B G H M C D E F
In - order : B H M G A D F E C
- (b) Write an algorithm for multiplication of two sparse matrices. 10
3. (a) Explain the shell sorting technique with an example. Give the complexity of above technique in terms of comparisions and storage required for both best and worst cases. 10

- (b) Write the functions to perform Push and Pop operations of stack using pointers. Using above functions, write an algorithm to convert a given infix notation to its equivalent postfix notation. **10**
4. (a) Write an algorithm to find the frequency (occurrence of words) from a given text file. The list of words and their corresponding frequency should be in the alphabetical order of words. **10**
- (b) Explain the different types of file organisations available. Also, explain one advantage and one disadvantage of each. **10**
5. (a) Using Dijkstra's algorithm, find the shortest path between A and F for the following graph. Show the intermediate steps also. **10**

- (b) Write short notes on the following with an example : **5x2=10**
- (i) AVL tree
- (ii) Circular Queue
